

“Technological & non
Technological Innovation:
A Challenge for the
Fashion SMEs ”

Introduction

- **Strategic Objectives :**
 - Benefiting from the market proximity
 - Fostering the fashion creativity
 - Shortening the time to market (reactivity)
 - Permanent adaptation to the changes (Flexibility)
 - Customisation & personalisation
- **Key Success Factors :**
 - Mastering the core business knowledge (Expert Systems)
 - Implementing the collaborative working organisations
 - Developing the “Rapid Prototyping” methods
 - Elaborating the “Extended Micro Factory Concept”

Traditional Method:

Time consuming and expensive
Not fitting with the consumer morphology

2D sketch

3D toile

sale

Innovation Strategy

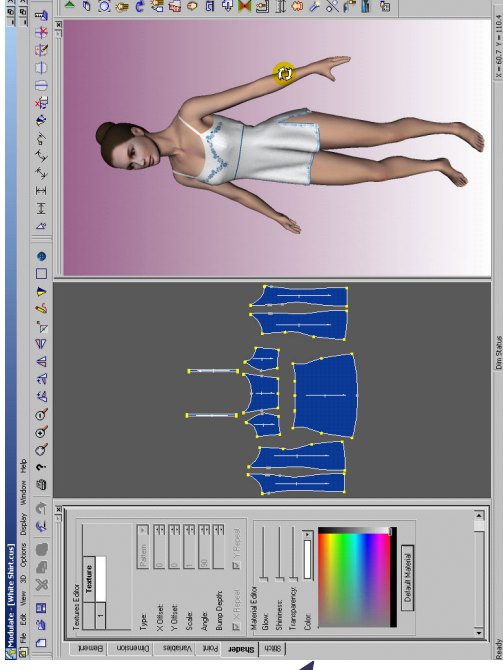

“From Virtual to Real”

The Roadmap

New Method of Work “From 6 weeks to 6 hours” prototyping

3D Avatars

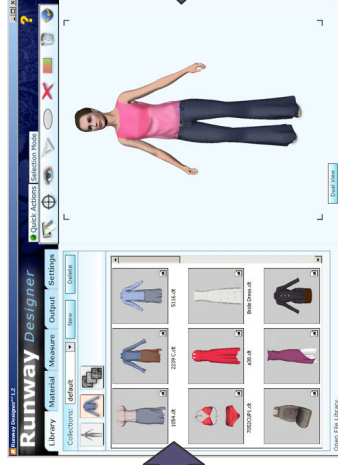

Style advice, Pattern Making and Fit evaluation

Fabrics Characterisation and Behavioural Models

Fabrics Design & Digital Printing

Virtual Prototype and Comfort Simulation

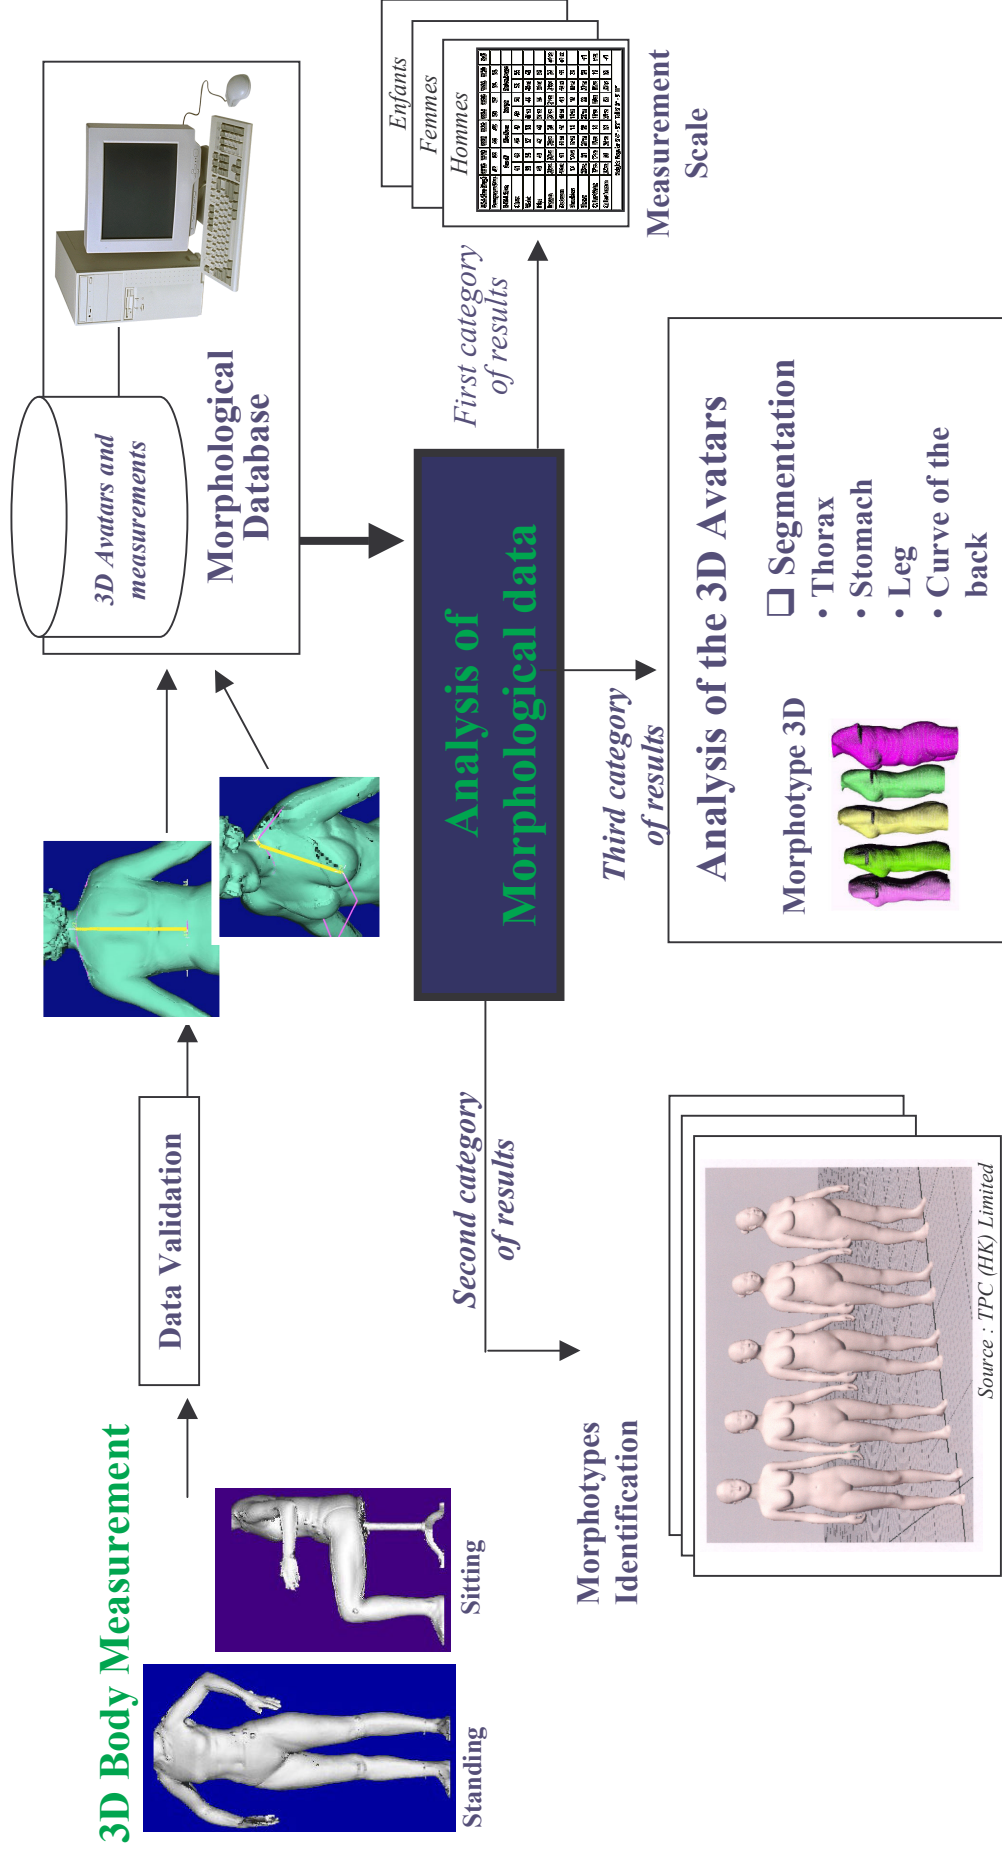

Prototype

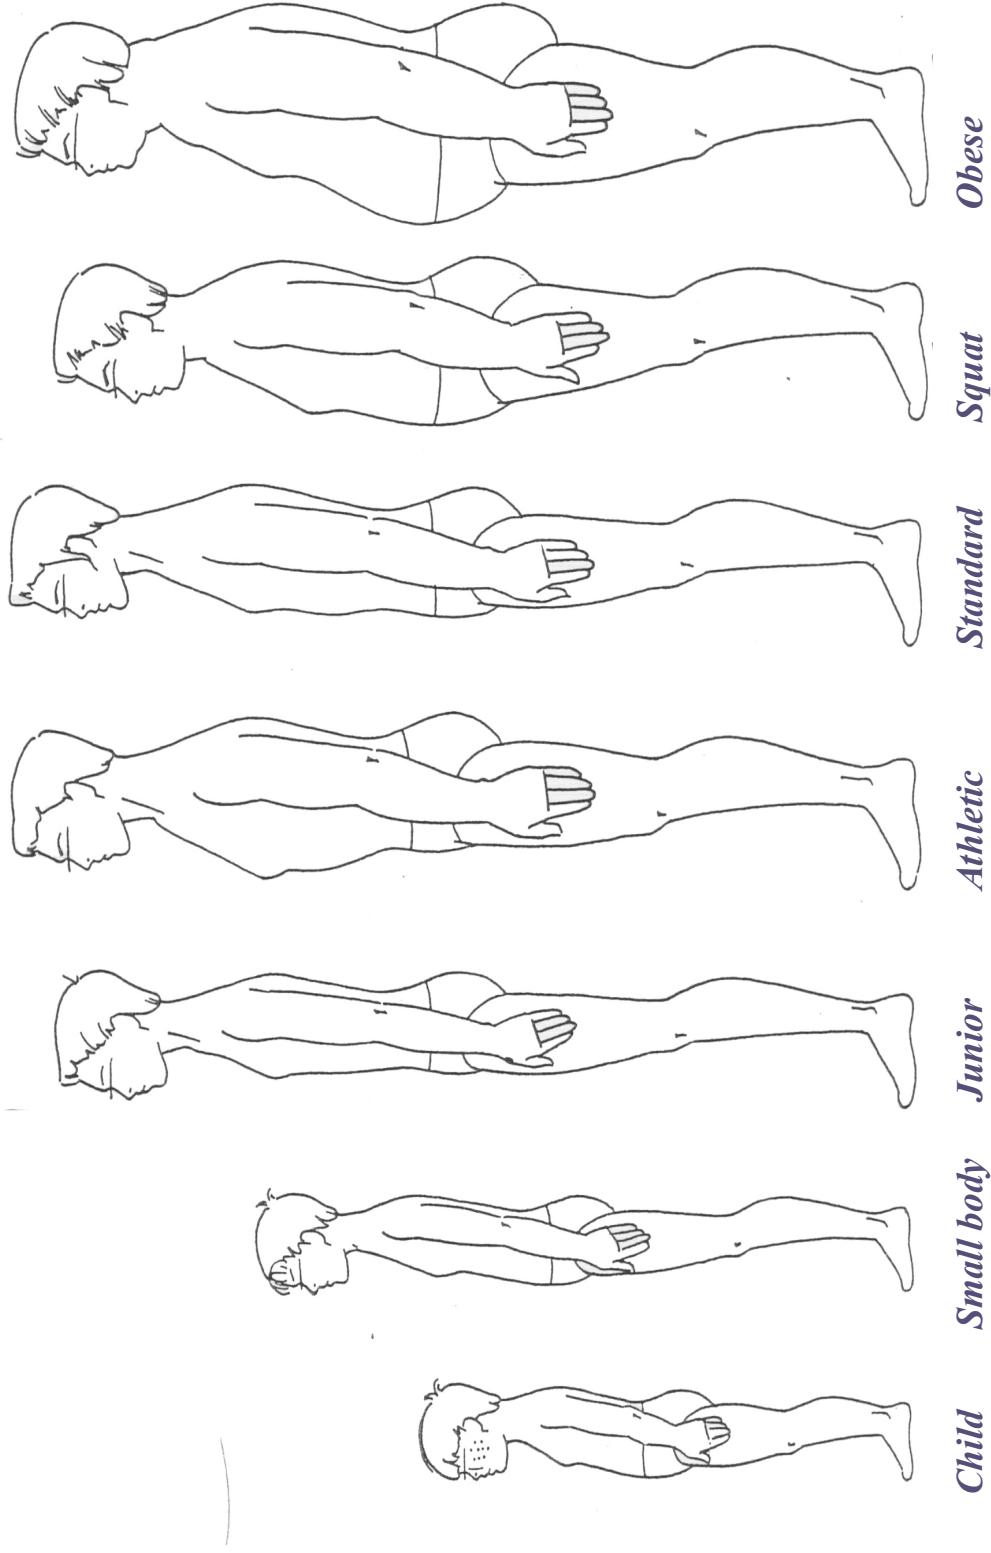

Extended Micro-factory

First Step: Morphology Knowledge

Morphotypes Identification Process

Accurate measurement: first step for correct sizing
Garment customised to target markets

Second Step: Fostering Creativity

□ Style Advise

- Collaborative work with forecasters, manufacturers and fabrics suppliers
- Analysis of Economic environment, influence of culture and Social changes
- Design tools
- Iterations of style
- Virtual try on
- Cataloging and archiving

Body
Input your measurements. If you aren't sure, please make your best guess.

Height: 5' 7" (5' 6" - 5' 8")
 Weight: 130 lbs (120 - 140)
 Bust: 34" (32" - 36")
 Waist: 26" (24" - 28")
 Hips: 36" (34" - 38")

Body Color
Please select the color that most closely matches your hair color.

Black Brown Grey Red White

New Working Interfaces

- Intuitive use of virtual models
- Intuitive interfaces that take account of the practice of fashion

Third Step: Material Characterisation and Modelling

- Mechanical and chemical properties,
- Variables capture and measurement,
- Behavioural models

Interaction with virtual pattern making

- Draping Real Garment Patterns with Fabric Parameters

- Real-time fabric rendering and animation to show materials behaviour.

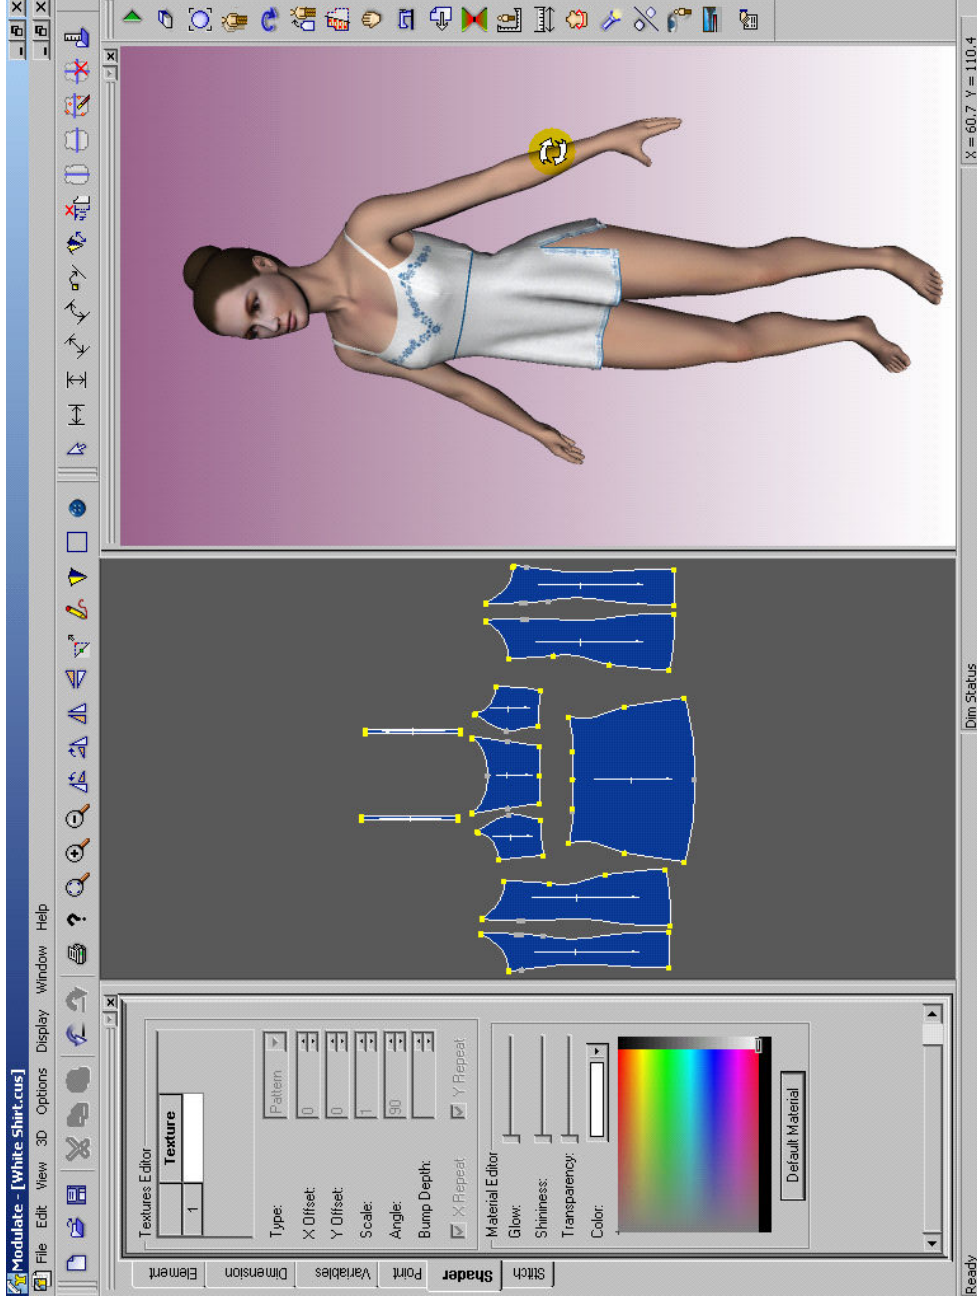

Behaviour Prediction

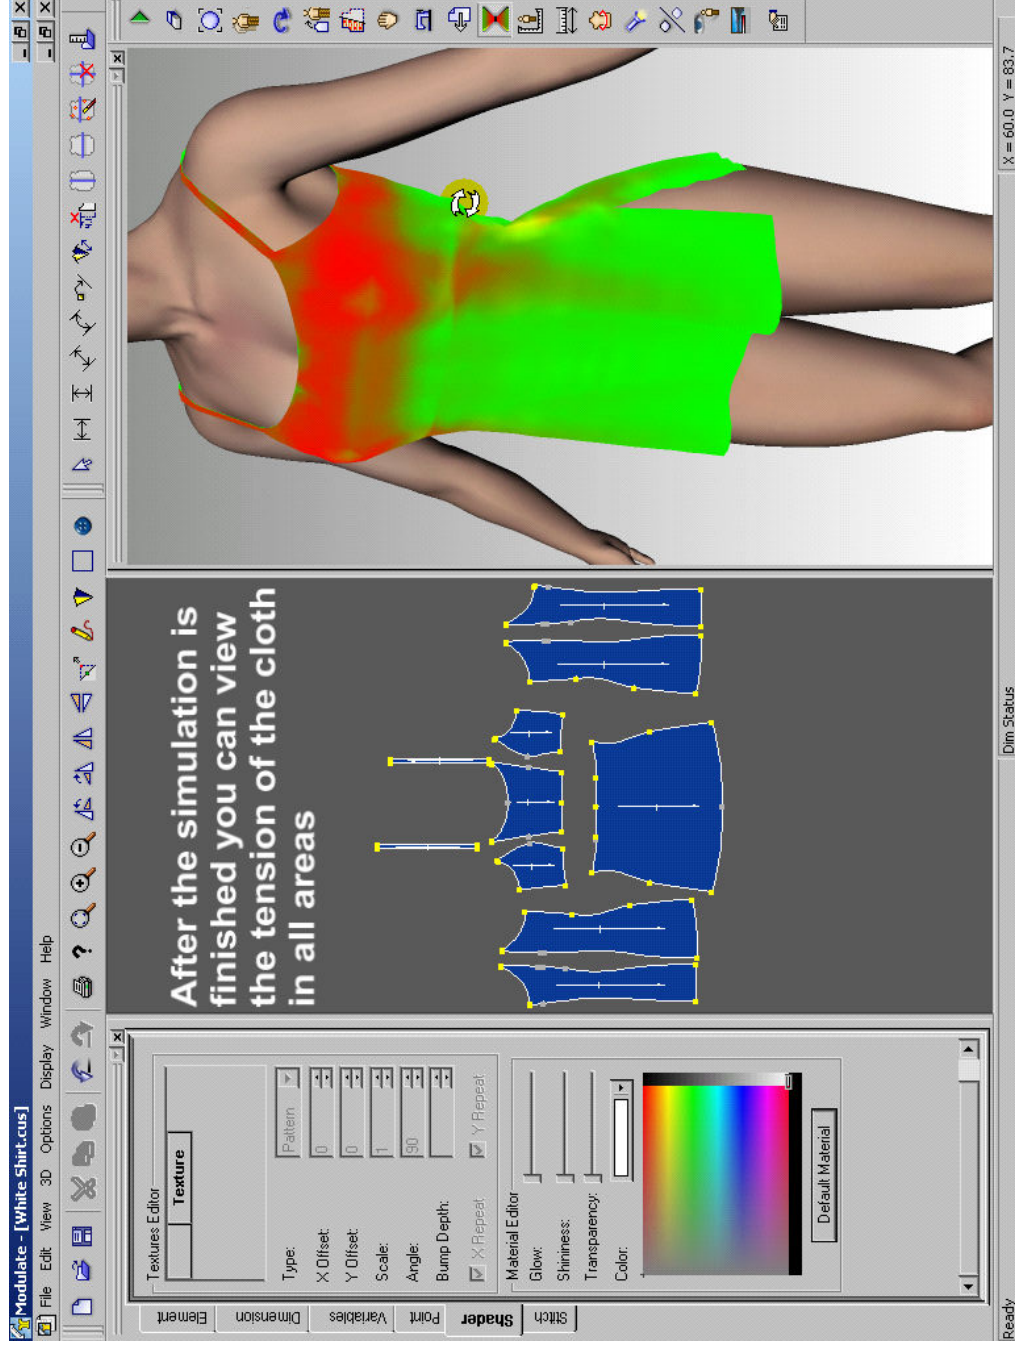

- Fabrics Behaviour prediction in process (Manufacturability),
- Fabrics Behaviour prediction in use (Usability),
- Impact Evaluation on the cost price

Fourth Step: Virtual Pattern Making

Pattern making according to selected “Avatar” imported from standard 3D files : VRML, 3D Studio Max, MAYA, IGES (3D).

Fit Evaluation

Evaluation of fit according to the morphotype and highlighting the tensions. Interactive process with material characterisation and modelling

Fifth Step: Digital Technologies

The Amber machine, from Stork

CAD fabrics design connected to an inkjet printer

Sixth Step: Virtual Prototyping & Show

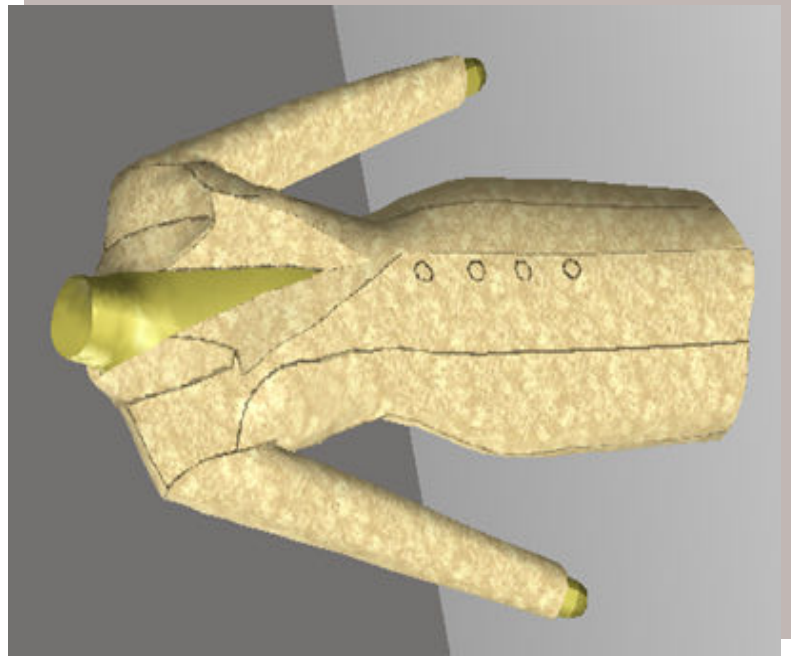

Converting patterns into virtual prototypes for fit and costing checks provided for approval and testing to makers and managers.

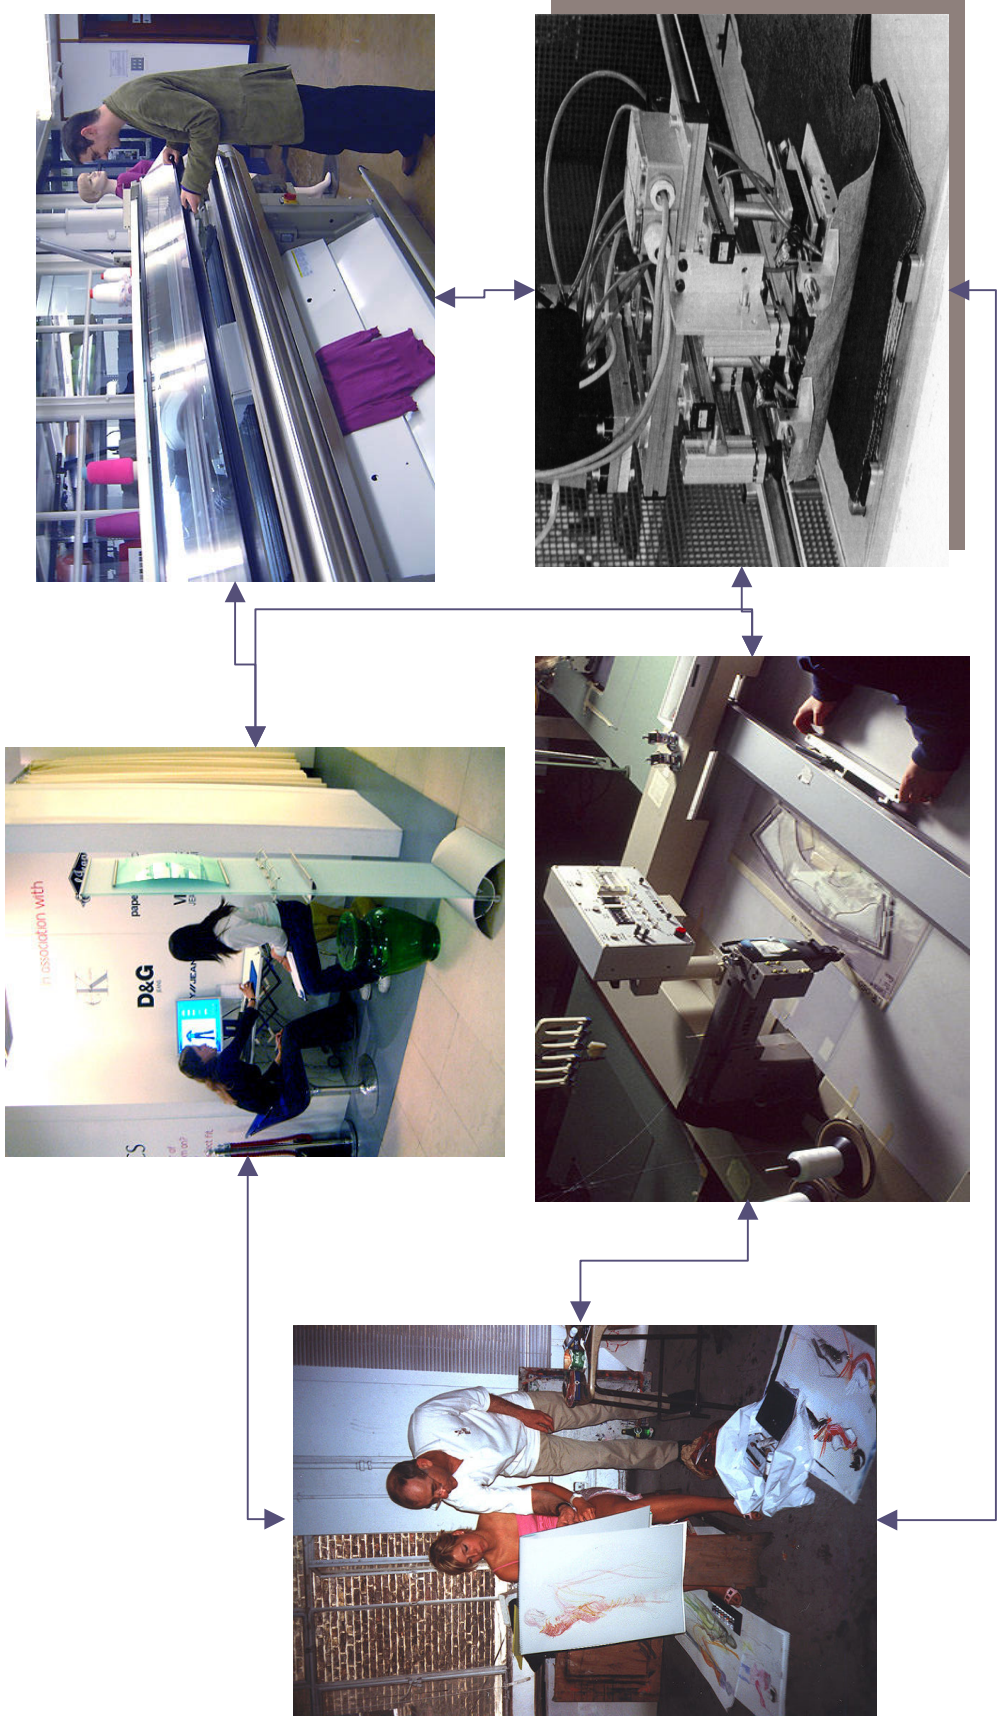

Virtual catwalk enabling comfort and elegance evaluation through Real Time Cloth Simulation

Seventh Step: Real Prototyping

Interactive Physical Evaluation with Virtual Prototype

Eighth Step: New Working Environment

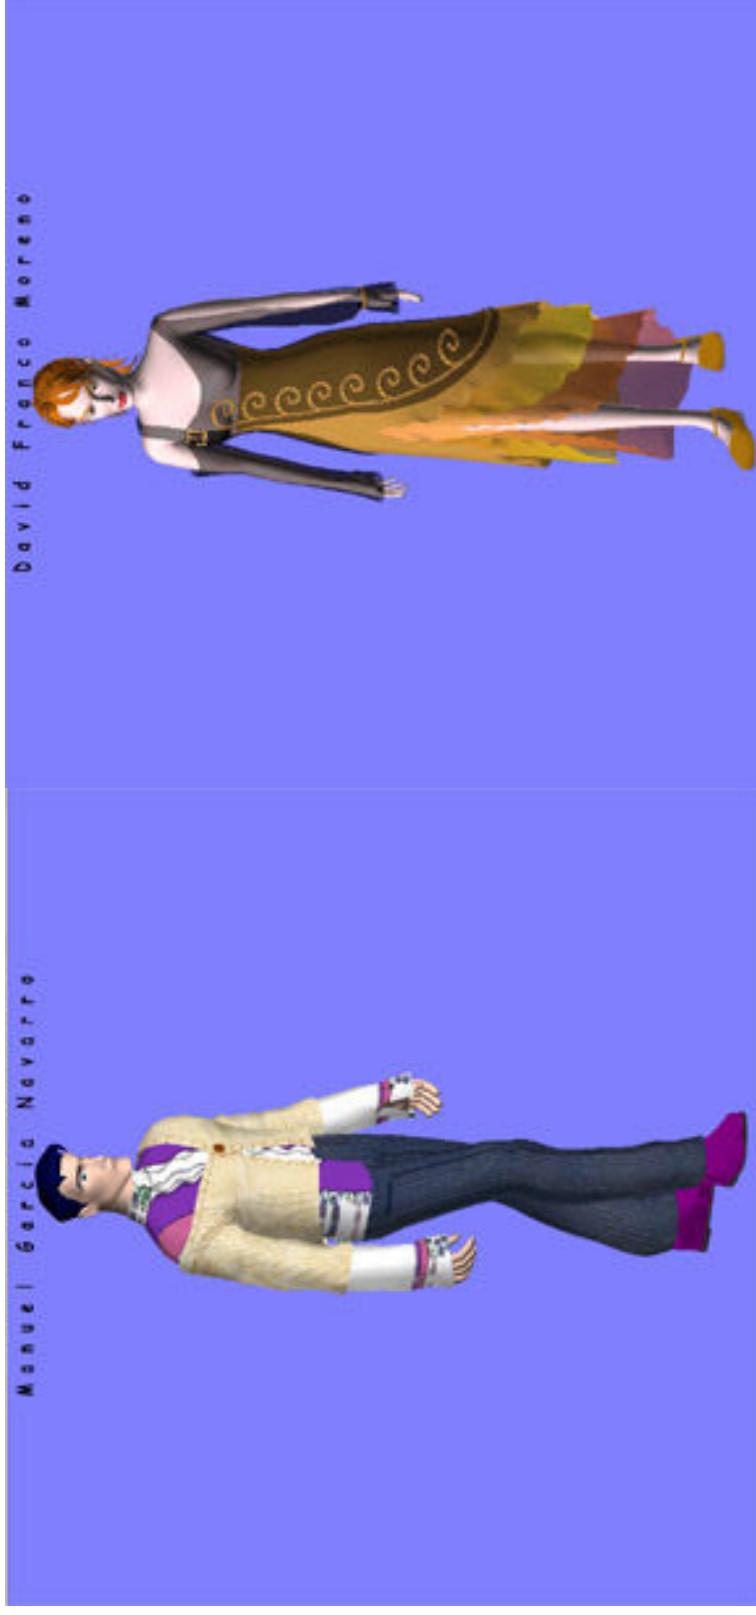

Collaborative working Environment between designers, technicians and manufacturing sharing information and knowledge. Organisation of the micro factory concept.

IFTH Technology Platform

Current Status

Support for Creativity

- Benchmarking and advising in design tools
- Model creation for aesthetic validation
- Virtual catwalks (commercial support)

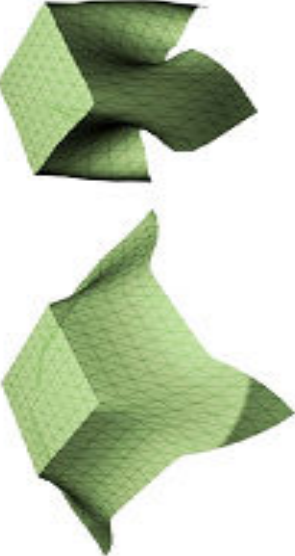

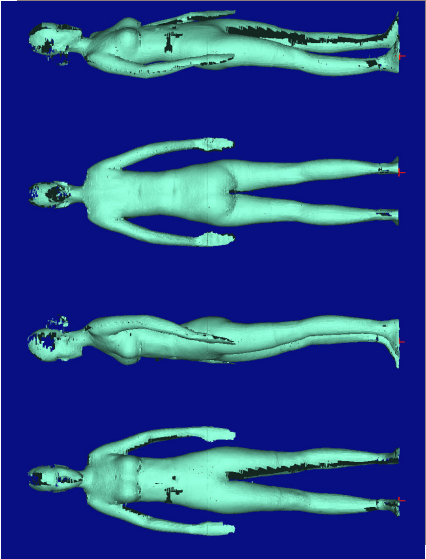

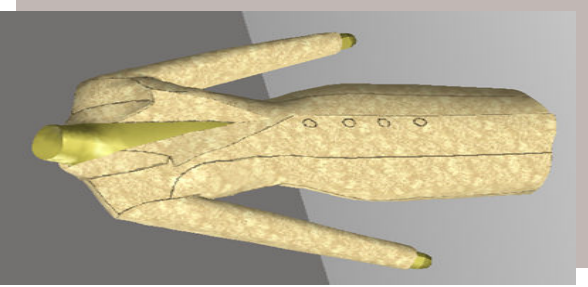

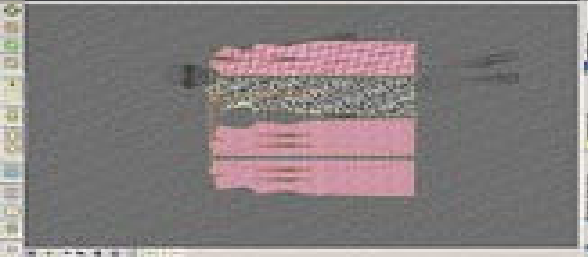

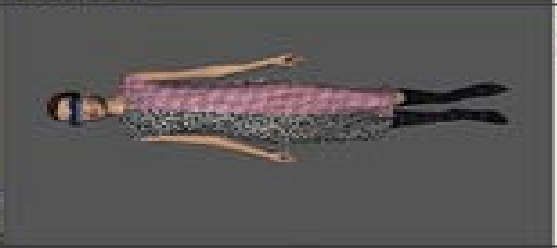

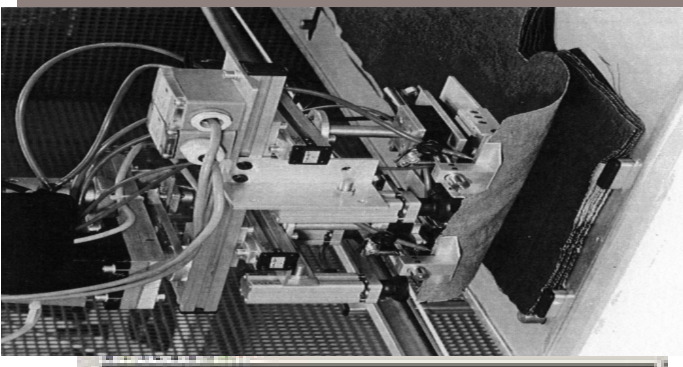

Collaborative Working Environment

Teamwork between designers, technicians and manufacturing
Taking into account the potential and limitations of CAD systems
and shared communications and file formats .

Integral knitting machinery
can use 3D scan data to create
seamless garments.
Sized to fit for lingerie and
hosiery

From VIRTUAL PROTOTYPES to CUSTOMISATION

 					<p>Material Characterisation (1) Human Body Characterisation (2)</p>	<p>Direct 3D design & 2D Flattening (3)</p>	<p>Real Time Simulation (4)</p>	<p>Customisation (5)</p>

LEAPFROG Initiative

Main Objectives

European Commission

Euratex

Industrial Steering Committee

Scientific Advisory Board

Project Management Board

Horizontal Management Tasks
SME involvement IPR Management Dissemination, Demonstration, Training

Research Module A

Optimal Fabric Preparation

1.1 Temporary Nano-coatings for optimal handling and other fabric functions

1.2 Flexible Printing solutions for last-minute fabric coloration

Research Module B

Clothing Manufacture

2.1 Fully automated Fabric Handling

2.2 Automated 3D Sewing

2.3 Radically new low to no-joining concepts

Research Module C

Fashion Creation Retail & User Concepts

3.1 From 3D Virtual prototyping to 3D production with the use of innovative simulation tools

3.2 Effective Customer Response & Value Adding Product-Services

Integration Module

H.1 Scientific framework & implementation tools for the extended Smart Garment Organisation

H.2 Management Solutions for fast production ramp-up or product change

Thank you!
